

FOR Windows

modernization solution

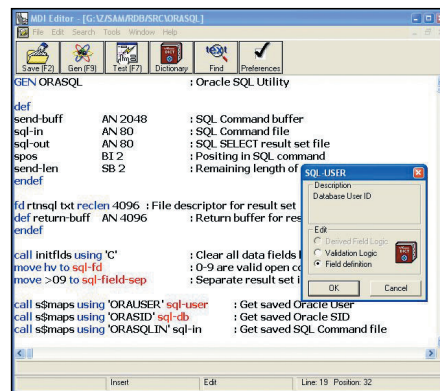

The success of the Microsoft Windows platform has prompted users to demand graphical user interfaces for their business applications. Whether you're in an IT department developing applications for end users or a software reseller trying to enhance your package, you may be looking for an easy way to modernize your applications - without starting from scratch.

System Z for Windows is the answer. ZWIN allows you to extend the life of your valuable legacy applications and move them to Windows or the Web, without rewriting your code! It combines the powerful System Z application development environment with a flexible user interface builder that makes creating graphical applications a breeze.

System Z's powerful business rules engine also allows you to easily integrate with Microsoft.NET, Java or other tools to create your own custom user interfaces...plus, the ability to access virtually all data sources and relational databases.

ZWIN User Interface Builder

ZWIN Compiler

Product Highlights

- Advanced Resource Editor/User Interface Builder
- Visual Program Debugger
- Powerful Data Dictionary Utility for defining data relationships, referential integrity and derived field logic
- Flexible Code Compiler with context sensitive information provided for keywords and data fields as well as drill-downs on data fields to unveil business rules and other logic
- Ability to build UI screens using programming syntax or the drag and drop approach of the Z User Interface Builder
- Easy integration with other user interface tools such as Microsoft.NET and Java
- Choice of Data Source. Use powerful ZBASE, included with System Z, or choose any Z Data Gateway that provides direct access to virtually all file systems and relational databases such as: Oracle, Sybase, Informix, Microsoft SQL Server, MYSQL, just to name a few.

So Why Wait? System Z for Windows makes it fast and easy to modernize your applications. Call us today at **800.361.7005** or visit us at **www.zortec.com** to learn more about System Z, along with our complete suite of software development solutions.
