

# WEB portal

As the global reach of the Internet expands, so does the need to deliver products, services, and information through a Web interface. That's why most organizations are moving a portion of their business to a Web-based model. For most, the barrier to success is finding a solution that can easily turn existing legacy systems into Web-based applications. Zortec International has a cost effective answer.

With its plug and play interface, the Z Web Portal easily transforms any application to a Web application that can be deployed anytime...anywhere...from corporate intranets or extranets to the Web. After all, the Internet isn't just for e-commerce applications. It's ideal for organizations who want and need to share information internally, whether it's within the same building or across the globe.

*"Over the next four years, one-fourth of the U.S. gross national product (GDP) and 17 percent of business trade will be conducted over the Web. The change is dramatic. We used to refer to Internet companies as a distinct breed. Now, every company is an Internet company."*

**Lori A. Calabro**  
Deputy Editor, CFO Magazine
